

a set of functional modules to be executed by the CPU, wherein a first functional module comprises a system security capability, a second functional module comprises a lead management capability, and a third functional module comprises a lead selection capability;

CPU means responsive to an input user request comprising at least one of lead management data and lead selection parameters, the CPU means responding to said request by executing at least one of the first, second, and third functional modules for generating information comprising at least one of a set of candidate leads and signification of a request; and

means connected to the CPU for outputting the information to an output user interface,

wherein an input customer profile is selectively entered by an individual sales agent,  
and

wherein said lead management capability supplies a best match output of said customer profile.

14. (Amended) A lead management system comprising:

a central processing unit (CPU);  
means connected to the CPU for inputting lead management data; and  
means for inputting lead selection parameters for searching said lead management data,

means for updating and maintaining lead data from external sources; and  
means for managing said lead data, said managing means comprising a lead usage  
quota mechanism for controlling a lead quantity, a lead usage time interval, and a lead  
availability to a selected user,

wherein said CPU responds to a request for leads tailored to inputted selection parameters by searching said lead management data and outputting selected information to an output user interface.

16. (Amended) The lead management system, as claimed in claim [15] 14, wherein said lead usage quota mechanism grants a user a predetermined number of leads during said lead usage time interval.
